Professional Summary

Associate Analyst and Computer Science engineer who turns technical requirements into Python, SQL, Generative AI, machine-learning, and cloud solutions. Delivered LLM/RAG applications, APIs, analytics, CI/CD, and edge AI systems that achieved 60% faster regression cycles, 30% lower RAG hallucination, and more than 95% computer-vision accuracy.

Skills

Programming and Data: Python, SQL, C++, Pandas, NumPy, SQLite, EDA, statistical analysis, data visualization
AI/ML: Generative AI, LLM applications, RAG, NLP, vector search, TensorFlow, Scikit-learn, CNNs, YOLOv8/YOLOv10, Random Forest
Software and Cloud: FastAPI, REST APIs, microservices, AWS, OCI, Linux, Jenkins CI/CD, Terraform, Git, Selenium, Automation Anywhere, Streamlit, Plotly

Professional Experience

Wipro Limited Noida, India
Associate Analyst *Jan 2026 – Present*

- Architected a Python/Selenium UI and API automation framework across 5 microservices, automating 500+ manual tests and reducing regression cycles by 60%.
- Designed a GenAI/LLM workflow to compare website data with Jama requirements and generate consistent system documentation.
- Validated transaction-data integrity and complex mappings with advanced SQL, supporting accurate processing and reliable business outcomes.
- Integrated nightly API/UI suites with Jenkins CI/CD and parallel Linux environments on AWS EC2, reducing testing duration by 30%.

Altair Engineering x Siemens Energy Bangalore, India
High Performance Computing Intern *Apr 2025 – Jun 2025*

- Improved HPC cluster efficiency by 37% by integrating 5+ applications and automating resource allocation.
- Established Linux monitoring and real-time alerts, shortening incident response by 60%; provisioned AWS/OCI infrastructure with Terraform, reducing rollout from 5 days to 3.

Proeffico Solutions Pvt. Ltd. Noida, India
Software Engineer Intern – AI and Computer Vision *Oct 2024 – Jan 2025*

- Engineered a RAG pipeline for unstructured documents, reducing hallucinations by 30% across 10,000+ queries through retrieval grounding.
- Deployed a YOLOv8 activity-classification system across 200+ employees, achieving more than 95% detection accuracy.
- Developed C++/Python monitoring across 30+ Raspberry Pi devices, sustaining 99% uptime for edge systems.

Tata Motors Jamshedpur, India
Software Engineer Intern *Feb 2024 – May 2024*

- Delivered Python/YOLO safety modules, improving production checks by 28%; evaluated CNN approaches that supported 12% fewer false-positive ADAS alerts.

Projects

Gold Price Conversational AI Assistant

- Launched a FastAPI, ChromaDB, Ollama, and DeepSeek R1 application with NLP classification, RAG, vector search, 30-day moving averages, and separate chat and transaction APIs.

Data Visualization and Predictive Analytics Dashboard

- Published an open-source Streamlit/Plotly dashboard for 5,000+ rows with interactive filters, correlation and PESTLE analysis, plus a Random Forest model evaluated using mean absolute error.

Accessible Railway Ticketing System

- Led development of a Python/Tkinter and SQLite application with Braille translation for 100+ visually impaired users.

Education

SRM Institute of Science and Technology – B.Tech., Computer Science and Engineering; CGPA: 8.21/10 2025

Certifications and Publication

Publication: "Smart Drone System Using Deep Learning Techniques," ICAIN 2025, Springer LNNS (Scopus indexed)
Certifications: IBM Data Analytics; NPTEL Cloud Computing; Cisco Cybersecurity; NCC "C" Certificate
